2025

1. MEMBUAT PROJECT CONSOLE/TANPA GUI dan COMMIT PERTAMA

2. MEMBUAT BRANCH BARU PADA GIT PROJECT (“implementasi-generic-method”)

3. MENAMBAHKAN METHOD DENGAN GENERIC

- Penjumlahan.cs

```
using System;
using System.Collections.Generic;
```

```

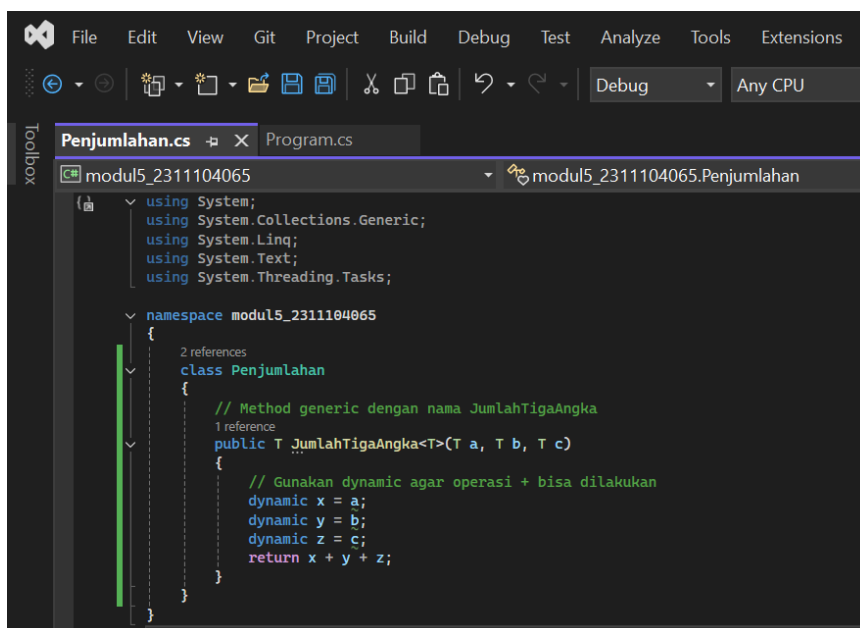

using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace modul5_2311104065
{
    class Penjumlahan
    {
        public T JumlahTigaAngka<T>(T a, T b, T c)
        {
            dynamic x = a;
            dynamic y = b;
            dynamic z = c;
            return x + y + z;
        }
    }
}

```

Penjelasan:

Kode C# ini mendefinisikan kelas Penjumlahan yang berisi sebuah metode generik bernama JumlahTigaAngka<T>. Metode ini dirancang untuk menjumlahkan tiga argumen (a, b, dan c) dari tipe data apa pun yang kompatibel dengan operasi penjumlahan. Untuk memungkinkan operasi penjumlahan (+) pada tipe generik T yang tidak diketahui secara spesifik saat kompilasi, metode ini secara cerdas menggunakan kata kunci `dynamic`. Dengan mengonversi input ke `dynamic` (x, y, z), C# menunda pemeriksaan tipe hingga *runtime*, sehingga operasi penjumlahan dapat berhasil dilakukan pada tipe data numerik seperti `int`, `float`, atau `double`.

- Program.cs

```
using modul5_2311104065;

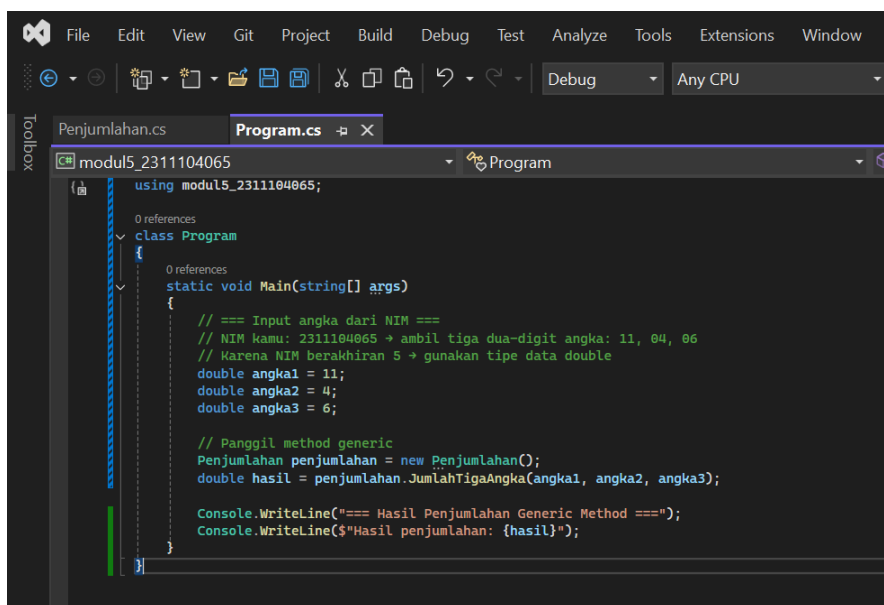

class Program
{
    static void Main(string[] args)
    {
        double angka1 = 11;
        double angka2 = 4;
        double angka3 = 6;

        Penjumlahan penjumlahan = new Penjumlahan();
        double hasil = penjumlahan.JumlahTigaAngka(angka1, angka2, angka3);

        Console.WriteLine("=== Hasil Penjumlahan Generic Method ===");
        Console.WriteLine($"Hasil penjumlahan: {hasil}");
    }
}
```

Penjelasan:

Kode C# ini adalah program utama yang mendemonstrasikan penggunaan metode generik `JumlahTigaAngka` dari kelas `Penjumlahan`. Berdasarkan aturan yang diberikan (NIM berakhiran 5), program ini menginisialisasi tiga variabel `double` (`angka1`, `angka2`, `angka3`) dengan nilai 11, 4, dan 6. Selanjutnya, ia membuat objek `Penjumlahan` dan memanggil metode `JumlahTigaAngka` dengan ketiga nilai `double` tersebut. Hasil penjumlahan ($11 + 4 + 6 = 21$) kemudian disimpan dalam variabel `hasil` dan ditampilkan di konsol, menunjukkan bagaimana metode generik dapat bekerja dengan tipe data `double` secara fleksibel.

4. MELAKUKAN COMMIT, PUSH, DAN PINDAH KE BRANCH

```

5. MENAMBAHKAN METHOD DENGAN GENERIC

- Penjumlahan.cs

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace modul5_2311104065
{
    class Penjumlahan
    {
        // Method generic dengan nama JumlahTigaAngka
        public T JumlahTigaAngka<T>(T a, T b, T c)
        {
```

```

        // Gunakan dynamic agar operasi + bisa dilakukan
        dynamic x = a;
        dynamic y = b;
        dynamic z = c;
        return x + y + z;
    }
}
}

```

Penjelasan:

Kode C# di atas mendefinisikan kelas Penjumlahan yang berisi metode generik JumlahTigaAngka<T>. Metode ini memungkinkan Anda menjumlahkan tiga nilai dari tipe data apa pun (misalnya, int, double, dll.) asalkan tipe tersebut mendukung operasi penjumlahan. Untuk mencapai fleksibilitas ini, metode tersebut menggunakan kata kunci dynamic, yang memungkinkan operasi penjumlahan dilakukan pada waktu program berjalan, bukan saat dikompilasi. Ini membuat kode lebih fleksibel karena tidak terikat pada satu tipe data numerik tertentu.

- SimpleDataBase.cs

```

using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace modul5_2311104065
{
    public class SimpleDataBase<T>
    {
        // === Properties ===
        private List<T> storedData;
        private List<DateTime> inputDates;

        // === Konstruktor ===
        public SimpleDataBase()
        {
            storedData = new List<T>();
            inputDates = new List<DateTime>();
        }

        // === Method untuk menambahkan data ===
        public void AddNewData(T data)
        {
            storedData.Add(data);
            inputDates.Add(DateTime.UtcNow);
        }
    }
}

```

```

    }

    // === Method untuk mencetak seluruh data ===
    public void PrintAllData()
    {
        for (int i = 0; i < storedData.Count; i++)
        {
            Console.WriteLine($"Data {i + 1} berisi: {storedData[i]}, yang disimpan pada waktu UTC: {inputDates[i]}");
        }
    }
}

```

Penjelasan:

Kode C# tersebut mendefinisikan kelas `SimpleDataBase<T>` sebagai penyimpanan data generik yang fleksibel, mampu menampung data dari berbagai tipe (T). Kelas ini dilengkapi dengan fungsionalitas untuk menambahkan data baru beserta catatan waktu UTC saat data itu dimasukkan, serta menampilkan seluruh data yang tersimpan lengkap dengan *timestamp*-nya. Ini memungkinkan pengelolaan data yang sederhana dan berurutan waktu.

- Program.cs

```

using modul5_2311104065;

class Program
{
    static void Main(string[] args)
    {

        double angka1 = 11;
        double angka2 = 4;
        double angka3 = 6;

        Penjumlahan penjumlahan = new Penjumlahan();
        double hasil = penjumlahan.JumlahTigaAngka<double>(angka1, angka2, angka3);
        Console.WriteLine("=== Hasil Penjumlahan Generic Method ===");
        Console.WriteLine($"Hasil penjumlahan: {hasil}");

        SimpleDataBase<double> database = new SimpleDataBase<double>();

        database.AddNewData(angka1);
        Thread.Sleep(1000); // agar timestamp berbeda
    }
}

```

```

        database.AddNewData(angka2);
        Thread.Sleep(1000);
        database.AddNewData(angka3);

        Console.WriteLine("\n=== Data yang Disimpan di SimpleDataBase ===");
        database.PrintAllData();
    }
}

```

Penjelasan:

Program ini menunjukkan penggunaan dua kelas generik, Penjumlahan dan SimpleDataBase, dengan tipe data double. Pertama, ia mendeklarasikan tiga angka (11, 4, dan 6) dan menggunakan objek Penjumlahan untuk menjumlahkan ketiganya, kemudian mencetak hasilnya. Selanjutnya, program membuat objek SimpleDataBase yang juga bertipe double. Ketiga angka tersebut kemudian ditambahkan ke dalam database ini satu per satu, dengan jeda waktu satu detik antar penambahan agar *timestamp* masing-masing data berbeda. Terakhir, program memanggil metode PrintAllData() pada objek database untuk menampilkan semua data beserta waktu penyimpanannya.

- Output

```

Microsoft Visual Studio Debug Console
=== Hasil Penjumlahan Generic Method ===
Hasil penjumlahan: 21

=== Data yang Disimpan di SimpleDataBase ===
Data 1 berisi: 11, yang disimpan pada waktu UTC: 5/25/2025 3:17:25 PM
Data 2 berisi: 4, yang disimpan pada waktu UTC: 5/25/2025 3:17:26 PM
Data 3 berisi: 6, yang disimpan pada waktu UTC: 5/25/2025 3:17:27 PM
